Team,

Thank you for your marathon effort in delivering the Climate-related Scope questions leveraging the LLMs for NBIM. You made the wild west experiment real in the shortest possible time. **This is probably the first production implementation of data delivery using the LLM at Intellect.**

This wouldn't have been possible without you guys taking the chance and ensuring that, as a team, we are cautious about every step so that we are not compromising on the data quality or the outcome.

Aditya, Satish: Thank you for taking the first step with LLMs in the context of NBIM delivery and challenging the status quo with Data Science teams and proving that LLMs can deliver some important outcomes that are not possible with our current models. This is the kind of mindset that makes our team very unique. What is more fascinating is your sheer drive from ideation to operationalising this wild west experiment despite many challenges and obstacles without compromising the coverage and quality of data.

Peri, Naveen, Barani: Thank you for going the extra mile and doing everything you can despite personal emergencies in the last few days to operationalise the model and provide extraordinary outcomes. You dealt with a lot of unknowns yet delivered the outcomes on time. Each of you stepped up to the occasion and worked as a team for the larger purpose.

Kishore, Ashutosh: We couldn't have done this without your guidance and, more importantly, the foundation that you provided in terms of leveraging AWS Bedrock and Anthropic.

Prabhu: AI Delivery for NBIM is not for the faint-hearted. You are making the impossible possible with your sheer passion and perseverance.

Regards,

Deepak Dastrala | Partner & CTO
